MAKING GREEN WORK

When it comes to parts washing, Bio-Circle has many advantages compared to traditional toxic solvents:

EFFICIENCY Bio-Circle keeps its cleaning efficiency over time, thanks to the self-renewing, self-regenerating nature of its cleaning solution. The micro-organisms present in the solution will degrade oils and greases safely on a renewable basis.

SAFETY No health hazards associated with repeated solvent usage such as: allergies, skin irritation, headaches, sleeping disorders, birth defects, etc...

COSTS No additional cost with Bio-Circle. The use of toxic solvents in the workplace involves additional costs such as protective clothing, waste disposal, ventilation, etc...

Let's compare!

See for yourself how **CARE Service** will make your system work at peak performance!

Bio-Circle wash basin prior to cleaning.

Wash basin after CARE Service.

Bio-Circle tank after drainage but prior to cleaning.

Tank after CARE Service.

Our CARE technician will come to your location to perform the maintenance of your system!

Read what our customers have to say about Bio-Circle:

"The model we try to have here at the garage is 'do no harm.' We like restoring cars and we like to do it in as green a way as possible. With that in mind, I try to find parts cleaners that don't harm the environment. ...Normally I always think the stronger the solvent, the better the cleaning, and of course it's harsh on your hands, but Bio-Circle doesn't work that way. ...The secret is in the solution. It sits in this thing overnight, and it actually cleans itself. That's pretty good."
